Staff Members. The clinical psychologists and psychotherapists at AICT provide the highest quality cognitive-behavioral treatment for depression, anxiety, phobias, eating disorders, personality disorders, child and adolescent problems and family and marital problems. INTRODUCTION. The postconcussion syndrome (PCS) is a common sequelae of traumatic brain injury (TBI), and it is a symptom complex that includes headache, dizziness, neuropsychiatric symptoms, and cognitive impairment . PCS is most often described in the setting of mild TBI, but it may also occur after moderate and severe TBI, and similar ...Adapts communication to meet the diverse needs of the patient or client and family, significant others, and caregivers, such as cultural, age-specific, educational, and cognitive needs. Adapts communication to meet the health literacy needs of the patient or client and family, significant others, and caregivers. By Marie A. DiCowden, Ph.D. The Myth "In traumatic brain injury, the recovery achieved at two years post-injury is the maximum recovery you can expect.", Cognitive Neurorehabilitation Second Edition.
