Non-equilibrium thermodynamics is a branch of thermodynamics that deals with physical systems that are not in thermodynamic equilibrium but can be described in terms of variables (non-equilibrium state variables) that represent an extrapolation of the variables used to specify the system in thermodynamic equilibrium. Statistical mechanics is one of the pillars of modern physics. It is necessary for the fundamental study of any physical system that has a large number of degrees of freedom. Treatise on Thermodynamics. This is an introductory textbook on Thermodynamics for students who have taken elementary courses in Physics and Chemistry, and are familiar with the elements of the Differential and Integral Calculus. e-books in Thermodynamics category Thermodynamics and Statistical Mechanics of Small Systems by A. Puglisi, A. Sarracino, A. Vulpiani (eds) - MDPI AG, 2018, Non-equilibrium Thermodynamics And Statistical Mechanics.
