Philosophy of science is a sub-field of philosophy concerned with the foundations, methods, and implications of science. The central questions of this study concern what qualifies as science, the reliability of scientific theories, and the ultimate purpose of science. This discipline overlaps with metaphysics, ontology, and epistemology, for example, when it explores the relationship between ... After giving an introduction, and reviewing the history of the field in sections 1 and 3, we move on to discuss central topics in social epistemology in section 3. These include testimony, peer disagreement, and judgment aggregation, among others. Section 4 turns to recent approaches which have used formal methods to address core topics in social epistemology, as well as wider questions about ... The Universe may have a purpose, but nothing we know suggests that this purpose has any similarity to ours. For example, history does not have any purpose, as Hegel's metaphysics claimed it has. However, the purpose of studying history is to predict the future. The following figure illustrates the two extreme worldviews painted so far by the ...
