Stereoscopy (also called stereoscopies, or stereo imaging) is a technique for creating or enhancing the illusion of depth in an image by means of stereopsis for binocular vision. The word stereoscopy derives from Greek, Modern ??????? (stereos), meaning 'firm, solid', and ??????? (skope?), meaning 'to look, to see'. Scientific visualization (also spelled scientific visualisation) is an interdisciplinary branch of science concerned with the visualization of scientific phenomena. It is also considered a subset of computer graphics, a branch of computer science. Glasses-free three-dimensional (3D) displays could revolutionize areas such as data visualization, medical training and entertainment, particularly if adapted to mobile devices. Caveat: This history page is far from comprehensive. It was started because of E.M.'s interest in tracing the roots of the free visualization software which became available in the early 1990's, notably MAGE, RasMol and Chime., Three-dimensional Imaging, Visualization, And Display.
